Carol Peterson is the HQ contact on SP12 and can better explain.

We also worked with TT to develop a presentation for Oregon on the differences between WQ10 & SP12. See attached.

**Subject:** RE: WQ-10/SP-12 baseline?

Hi Lynda,

I knew that WQ-10 is more flexible and allows listings from 1998 and beyond... but what about SP12?

Can you tell us why they are so intent about keeping the baseline at 2002? I really can't understand it and when I inquired about it, someone said it was because of the water DDs.

**Subject:** RE: WQ-10/SP-12 baseline?

**For WQ-10, any water listed in 1998/2000 or later may be counted towards the measure. From computational guidance:**

**Methodology for computation of results:** Since the main referent for this measure will be State 303(d) or Integrated Reports, States which did not submit 2000 303(d) lists may substitute the 1998 list for their base year. "Waterbodies" therefore refer to 303(d)-listed segments or category 4 or 5 waters on the Integrated Report. **The measure includes all primarily NPS-impaired waterbodies that a state fully or partially restores, regardless of funding source.** Waters listed **after** 1998/2000 which are then de-listed from the 303(d) list (for some or all pollutants) or which move from categories 4 (which includes waters impaired by "pollution") or 5 to category 1 or 2 may also be counted against this measure. In other words, although 1998/2000 is the base year, the 303(d) lists for those years need not be the only referent lists.

**Subject:** WQ-10/SP-12 baseline?

Good afternoon all,

Hey, can anyone tell me if we are still being held to the 2002 baseline for these measures? We need to know if a waterbody listed in 2004 counts toward our measure.

Thanks.

...Steve
